

# California Smog Check Program Alert!

## BAR Required Upgrade Now Available

Opus/ESP has been a partner in the California Smog Check Program since it began. In fact, over 75% of the Smog Stations in CA rely on Opus for their equipment. That's not just because of our technology, but also because of our service. We have more factory-direct service technicians than all our competitors combined.

### **The new Upgrade provides exactly what is required by BAR for your OIS system**

The original computer hardware and operating system are obsolete. Therefore, it's time for a new, more powerful PC, running Windows 11 Pro OS. In addition, the upgrade includes the BAR approved biometric palm scanner.

*"The monthly subscription plan keeps my equipment compliant. I'm so happy not to have any worries."*

***This upgrade package is exactly what you need to stay in compliance with new BAR regulations. It's simple to install, and if you need help, we are happy to assist.***

### **Getting your new System1® has never been easier!**

Smog shops overwhelmingly choose "Equipment as a Service" (EaaS).

Why shell out large sums of money for expensive equipment, only to see it become obsolete? Opus introduced Equipment-as-a-Service (EaaS) in California back in 2014, as an innovative way to acquire new equipment. You simply subscribe, and the equipment is delivered to your shop. The plan includes an ongoing parts and labor warranty, as well as toner cartridges for the laser printer.

The System1® EaaS program is flexible and puts you in control. Not to mention, we take care of everything:

- BAR compliant equipment
- Complete warranty with full parts and labor coverage
- Free delivery and tech line help for installation and activation
- Free toner
- Service second to none
- 100% satisfaction guaranteed
